

## PRILLCOTE<sup>®</sup> HERB

Prillcote<sup>®</sup> herb seed treatment has been developed for oversowing. The product includes plant nutrition, plant protection and weight build-up additives.

ADDITIVE	DISEASE PROTECTION/ NUTRIENTS	BENEFIT
Contact fungicide	'Damping off' ( <i>Pythium, Fusarium</i> )	Protects the root zone from 'Damping off' fungal pathogens in the first three to four weeks of establishment.
Nutrient	Lime	Provides the weight increase for improved ballistics, helping ensure more seed reaches its target on the soil surface. Also helps provide a localised pH correction around the seedling.
Bird repellent		The green coloured treatment and the fungicide component have properties that help deter birds from eating surface applied seed.

## WHERE SHOULD PRILLCOTE HERBS BE USED?

Prillcote herb seed treatment is recommended for all chicory and plantain seed applied in an aerial oversowing programme. With the seed coat increasing the weight of the seed by 100%, the sowing rate of Prillcote herb seed should be increased by 100% in comparison to untreated seed.

Prillcote treated Ecotain<sup>®</sup> environmental plantain in a ryegrass and clover sward.
